Cyber · AI · Defense

WEBSITE CONTENT & BUILD SPECIFICATION

WEBSITE CONTENT

Solutions, industries, and brand — ready to build

A complete content specification for the Namlameis website

Prepared for the development team · Confidential · v1.0

Founded 2024 · Salzburg, Austria

0 How to use this document

This is the complete written content for the Namlameis website, organized page by page in the structure a developer should build. It follows the model of a modern, premium security platform site (clean, confident, generous in spacing, light theme), comparable in ambition to leading platforms in the category.

- Each PAGE block marks a distinct page or route. Build one page per block.
- Each service and industry has its own dedicated page with its own content — do not merge them.
- DEV NOTE callouts give layout and behavior guidance; they are instructions to you, not website copy.
- Headings, hero lines, body copy, and lists are the actual words to place on the page.

DEV NOTE Brand basics — Logo: the Namlameis ant mark plus the “Namlameis” wordmark (assets provided separately as SVG/PNG). Icon/favicon: the ant mark alone. Typeface direction: a refined serif for display headings (e.g. Fraunces) paired with a clean sans (e.g. Geist/Inter) for body, and a monospace for small labels. Palette: deep navy (#0B1A2E) and ink (#0A1424), amber accent (#F0712C), azure (#3D7DD8), teal (#1FA98F), on light paper (#FFFFFF / #F7F9FC). Keep the feel calm, precise, and premium.

1 Site map — information architecture

The full set of services has been organized into four core Solutions (each with nested capabilities so nothing is lost) and three primary Industries, plus the brand and contact pages. This keeps the navigation clean and authoritative rather than an overwhelming flat list.

Primary navigation

Nav item	Contains
Solutions	AI-Powered Cybersecurity · Vulnerability Discovery & Offensive Security · Threat Detection & Response · Reputation & Narrative Defense · Data Security
Industries	Financial Services & FinTech · Government & Defense · Critical Infrastructure
Platform	The unified Namlameis approach — signal to narrative
Company	About (founded 2024) · Founder & leadership messages · Careers
Contact	Service-request form · contact details · LinkedIn

How the requested services map

DEV NOTE This table shows where every service you listed lives in the new structure. Each becomes either a Solution page or a named capability/section within one. Build the four Solution pages; the capabilities become sections inside them with their own anchor links.

Core Solution page	Capabilities nested within it
01 · AI-Powered Cybersecurity	AI Security · AI Security / AI Red-Teaming · Generative-AI Threat Defense · Real-Time Threat Intelligence · Detection Engineering

Core Solution page	Capabilities nested within it
02 · Vulnerability Discovery & Offensive Security	Vulnerability Discovery · Vulnerability Research · Penetration Testing & Red Teaming · Attack Surface Management · Cyber Risk Assessment
03 · Threat Detection & Response	Threat Detection & Response · Automated Threat Response · Security Operations · Incident Response · Security Architecture
04 · Reputation & Narrative Defense	Reputation & Narrative Defense · OSINT · Threat Narrative & Analysis
05 · Data Security	Data Security · Data Discovery & Classification · Access Governance · Data-in-Use & AI-Era Exposure · Encryption & Key Discipline · Exfiltration Defense
Industries	FinTech Cyber Defense · Government & Defense · Critical Infrastructure Protection

Hero eyebrow: CYBER · AI · DEFENSE

Hero headline: We find what others miss — before it finds you.

Hero sub-headline: Namlameis unites AI-powered cybersecurity, human-led vulnerability discovery, threat detection and response, and reputation defense in a single, disciplined practice. Where automation finds the known, we hunt the unknown.

Primary button: Request a briefing

Secondary button: Explore the platform

DEV NOTE Hero is a split layout: copy on the left, an abstract “signal map” illustration on the right (nodes, a trail, a highlighted threat). Keep one clear call-to-action emphasized.

Section — The difference

Most security companies sell you a platform. We give you what a platform alone cannot: a patient, expert team that hunts the threats automation was never built to find — and an intelligence that turns overwhelming signal into a clear story you can act on. Machines find the known. We find the unknown.

Section — Solutions overview (5 cards)

Five disciplines. One method. Each card links to its full page.

- **AI-Powered Cybersecurity** — Intelligence that learns your environment and defends it in real time.
- **Vulnerability Discovery & Offensive Security** — Human-led research that finds what scanners and checklists never will.
- **Threat Detection & Response** — See the attack as it forms; answer it before it lands.
- **Reputation & Narrative Defense** — A reputation is a perimeter. We monitor, defend, and restore it.
- **Data Security** — Protection that travels with the data — at rest, in motion, and in use.

Section — Industries strip

Trusted where the stakes are highest: financial services and FinTech, government and defense, and the critical infrastructure a nation depends on.

Section — The method (4 steps)

The forager’s method: an ant colony searches every path until the shortest route to the target emerges — patient, distributed, signal-driven. Our engagements follow the same discipline: Reconnaissance, Hypothesis, Probe, Signal.

Section — Closing call to action

The first conversation is confidential, and it costs nothing. If you are responsible for defending something that matters, let us talk about what others may have missed.

Eyebrow: SOLUTIONS · 01

Hero headline: Intelligence that learns the adversary.

Hero sub-headline: Defense at machine speed, guided by human judgment. Our AI-powered cybersecurity recognizes the shape of an attack — not merely its signature — and turns a flood of signal into a decision you can trust.

Overview

The defender's problem has never been too little data — it is too much. The modern adversary hides inside the flood. Namlameis builds and operates the artificial intelligence that finds them there: detection trained on your real environment, intelligence drawn from the live threat landscape, and automated response that contains a threat the instant it is recognized, while a human stays in command of every consequential decision.

Capabilities

- **AI Security** — We secure the artificial intelligence you depend on: the models, the data pipelines, and the agents that increasingly act on your behalf.
- **AI Red-Teaming** — We attack your AI the way a determined adversary would — probing for prompt injection, data leakage, and the failure modes conventional testing cannot see.
- **Generative-AI Threat Defense** — We defend against the new generation of synthetic threats: machine-generated phishing, deepfakes, and disinformation produced faster than any human team can answer alone.
- **Real-Time Threat Intelligence** — A living picture of the threats that matter to you specifically, refreshed continuously and filtered of noise.
- **Detection Engineering** — Detection content tuned to your environment — each rule tested, measured, and owned, never bought off a shelf and forgotten.

What you receive

A detection capability deployed in your environment, an operations runbook your team can run, documentation for every model we put into production, and an evaluation suite that proves the system works against real attack patterns — not just benchmarks.

Eyebrow: SOLUTIONS · 02

Hero headline: Find what others miss. Before it finds you.

Hero sub-headline: Human-led offensive research for organizations whose attack surface matters enough to need the truth — not a familiar report from a tool that learned nothing new.

Overview

Scanners match the patterns of attacks that have already been seen. The breach that ends an institution is almost always the one nobody had a signature for — the complex, chained, human-shaped flaw living in the seam between two systems. This is the work Namlameis was built to do: patient, expert, adversarial research that pursues the unknown vulnerability and proves it before anyone else can exploit it.

Capabilities

- **Vulnerability Discovery** — Deep, manual investigation across applications, APIs, mobile, cloud, and infrastructure, pursuing the flaws automation cannot reason about.
- **Vulnerability Research** — Original research into the technologies you depend on, including the AI systems now woven through them.
- **Penetration Testing & Red Teaming** — Authorized, instrumented, reversible attack simulation — from focused tests to full-scope adversary emulation against people, process, and technology.
- **Attack Surface Management** — Continuous discovery and mapping of everything you expose to the world, including the assets you forgot you owned.
- **Cyber Risk Assessment** — A clear-eyed appraisal of where you are genuinely exposed, prioritized by real business impact rather than raw severity scores.

Our method — the forager's path

Reconnaissance, a long and quiet read of the system as designed and deployed. Hypothesis, a small set of testable ideas about where weakness most likely lives. Instrumented probing, every action documented, authorized, and reversible. Validation, because we report only what we have reproduced. Responsible signal, findings delivered to you first, with the precision required to act. And a written retrospective, the institutional memory each engagement leaves behind.

What you receive

A findings report with a reproduction for every issue, technical and business impact, and a clear remediation path — plus a verification re-test once you have fixed what we found, included rather than billed again.

Eyebrow: SOLUTIONS · 03

Hero headline: See the attack as it forms. Answer before it lands.

Hero sub-headline: Detection, response, and the operational discipline that sustains them — engineered into your defense, not bolted on after the incident.

Overview

Speed decides the modern incident. The difference between a contained event and a catastrophe is measured in minutes — how quickly the threat is seen, understood, and answered. Namlameis builds the capability to compress that interval: detection tuned to your environment, response planned before it is needed, and the architecture and operations that hold the line under pressure.

Capabilities

- **Threat Detection & Response** — Continuous detection that recognizes the shape of an attack, paired with a response that contains it decisively.
- **Automated Threat Response** — Planned, automated containment that acts at machine speed while keeping a human in command of consequence.
- **Security Operations** — The disciplined daily rhythm of defense, designed so your team can sustain it long after we step back.
- **Incident Response** — When the worst happens, a calm, practiced process: contain, investigate, recover, and learn — with chain-of-custody on every finding.
- **Security Architecture** — Defense designed into the structure of your systems, so the next incident is prevented by construction, not patched after the fact.

What you receive

A tuned detection library with an owner and a test for every rule, written incident playbooks exercised before they are needed, an architecture review against an explicit threat model, and an operating cadence your team can run.

Eyebrow: SOLUTIONS · 04

Hero headline: Defend the story they will tell.

Hero sub-headline: A reputation can be lost in a day by an adversary who never touches your network. We defend it with the same rigor we bring to your systems.

Overview

In an age of synthetic media and coordinated influence, the narrative about an organization has itself become an attack surface. Namlameis treats it as one — mapping the threat environment, monitoring it continuously, and responding to manufactured controversy, disinformation, and impersonation with precision rather than panic. For leaders whose names are institutional assets, we extend this defense to the individual.

Capabilities

- **Reputation & Narrative Defense** — Continuous defense of the perimeter of meaning: the stories, claims, and signals that shape how the world sees you.
- **OSINT** — Open-source intelligence that reveals what an adversary can already learn about your organization and its leadership — so you can close the gap first.
- **Threat Narrative & Analysis** — We transform scattered, overwhelming signal into a clear, contextual account of what is happening, why it matters, and what to do next.

What you receive

A written map of your threat environment and exposure, continuous monitoring against the threats that matter, pre-drafted response playbooks for the most likely scenarios, and — for named individuals — dedicated personal digital-threat protection.

Eyebrow: SOLUTIONS · 05

Hero headline: Your data outlives every perimeter you build around it.

Hero sub-headline: Walls protect a place; data does not stay in one. We defend information itself — at rest, in motion, and in use — so that what matters remains protected wherever it travels, whoever touches it, and whatever asks for it.

Overview

For three decades, security was conceived as a question of borders: build a strong enough wall, and what lies inside is safe. That assumption quietly expired. Data no longer lives inside a perimeter — it is copied into a colleague's inbox, synchronized to a personal device, embedded into a vector database, and, increasingly, read and acted upon by autonomous agents that never tire and never sign a confidentiality agreement. The boundary did not move; it dissolved.

Namlameis approaches data security from the only vantage point that survives this collapse: we defend the data, not merely the place it happens to rest. We begin by answering the question most organizations cannot — where does your sensitive information actually live, and who, or what, can reach it? — and we treat the answer as a living map rather than a one-time audit. From that foundation, we build protection that travels with the information itself: classification that reflects genuine business and regulatory sensitivity, controls calibrated to least privilege, and continuous observation of how data is accessed, moved, and transformed. The principle is simple to state and demanding to practice: protection must be a property of the data, not a privilege of its location.

Capabilities

- **Data Discovery & Classification** — We locate sensitive information across your estate — including the shadow copies and forgotten stores no inventory remembers — and classify it by true sensitivity, so that protection is proportionate to consequence rather than uniform and therefore ineffective.
- **Access Governance & Least Privilege** — We map who and what can reach each class of data, and we close the quiet excess of standing permissions that adversaries inherit the moment a single account is compromised.
- **Data-in-Use & AI-Era Exposure** — We address the newest and least-understood surface: the data exposed when it is used — passed into models, retrieved by agents, embedded into AI pipelines — where traditional encryption offers no protection because the system must read the data to function.
- **Encryption & Key Discipline** — We ensure data is protected at rest and in motion with cryptography that is correctly implemented and, just as critically, with key management that does not silently undermine it.
- **Continuous Monitoring & Exfiltration Defense** — We observe how data behaves, establishing what normal access looks like so the abnormal — the slow exfiltration, the unusual query, the agent acting beyond its mandate — becomes visible while it can still be stopped.
- **Regulatory Alignment** — We align protection with the obligations that govern your data, including the GDPR and the Austrian Data Protection Act, so that compliance becomes a consequence of sound security rather than a separate burden.

What you receive

A living map of where your sensitive data resides and who can reach it; a classification scheme calibrated to real sensitivity rather than guesswork; a least-privilege access model with the standing

excess removed; monitoring tuned to detect abnormal data movement before it becomes loss; and a clear, prioritized remediation path — each recommendation written for the engineers who must implement it and justified for the leaders who must fund it.

Eyebrow: INDUSTRIES

Hero headline: Where the stakes are highest.

Hero sub-headline: We work where a missed flaw is never merely an inconvenience — where it is regulatory, strategic, or a matter of public safety.

Three sectors anchor our practice today. Each card links to its full page: Financial Services & FinTech, Government & Defense, and Critical Infrastructure.

Eyebrow: INDUSTRIES

Hero headline: FinTech cyber defense, before the regulator — or the adversary — finds the gap.

The challenge

Financial institutions stand at the intersection of relentless regulatory pressure, the most determined adversaries in the threat landscape, and zero tolerance for downtime. A breach is not only an operational event; it is a story that moves markets and a regulatory exposure that compounds long after the systems are restored.

How we help

- Human-led vulnerability discovery across payments, trading, and core banking systems — with particular focus on the business-logic flaws that move money.
- AI-powered fraud and intrusion detection, tuned to your real transaction patterns.
- Findings mapped to your regulatory obligations, so security work and compliance reinforce one another.
- Reputation and narrative defense for incident scenarios, ready before they are needed.

Eyebrow: INDUSTRIES**Hero headline:** Discretion, dual-use rigor, and depth for the mission.**The challenge**

Government and defense systems face the most capable adversaries that exist, operate under the strictest compliance regimes, and cannot tolerate the exposure of an ordinary commercial security relationship. The work demands not only capability, but discretion and seriousness equal to the mission.

How we help

- Sovereign-grade discretion: engagements are never marketed, never referenced, never disclosed.
- Dual-use discipline, with full awareness of EU and Austrian export-control obligations.
- Vulnerability research and AI defense built for sophisticated, persistent adversaries.
- Defense against information operations and disinformation aimed at public institutions.

DEV NOTE Keep “defense-grade” as a quality descriptor throughout the site. It is not a claim of government accreditation. This distinction matters legally and for credibility.

Eyebrow: INDUSTRIES

Hero headline: When a breach becomes a public-safety event.

The challenge

Energy, utilities, transport, and the systems a society depends on often run on technology designed decades before the present threat landscape existed — long-lived, difficult to patch, and increasingly connected to networks an adversary can reach. Here, a security failure is not an IT problem. It is a threat to physical safety and continuity.

How we help

- Assessment that respects operational-technology constraints, where an outage carries physical consequence.
- Detection engineering tuned to industrial protocols and behavior.
- Architecture and resilience review for continuity under attack.
- Incident readiness — playbooks and exercises for safety-critical scenarios.

Eyebrow: THE PLATFORM

Hero headline: One system. From signal to narrative.

Hero sub-headline: A multi-layered approach across all of your networks in real time — automating discovery, calculating risk, detecting threats, and planning response, then transforming overwhelming data into a clear, contextual threat narrative a human can act on.

The layers

- **Automated discovery** — continuous attack-surface mapping so nothing material goes unseen.
- **Risk calculation** — every finding scored for real impact, in your context.
- **Real-time detection** — recognizing the shape of an attack, not just its signature.
- **Automated response** — containment at machine speed, with a human in command.
- **Threat narratives** — raw telemetry transformed into a clear account of what matters and why.

The platform finds the known so our researchers can spend their attention where it uniquely counts: on the unknown.

Eyebrow: ABOUT

Hero headline: Founded in 2024 to find what others miss.

Our story

Namlameis was founded in 2024 on a single conviction: that the threats which truly endanger an institution are precisely the ones automation was never built to find. While much of the security industry grew louder and more automated, we chose the opposite path — a small, patient, deeply skilled practice that does the work, finds what is actually there, and reports it with precision.

Our name and our emblem are the same idea. An ant colony is not formidable because any single ant is strong; it is formidable because of the structure, patience, and relentless search of the colony as a whole. It explores every path until the surest route to the goal emerges. That is how we work — distributed, methodical, signal-driven, and quietly unstoppable.

Today Namlameis unites four disciplines that the rest of the industry treats as separate — AI-powered cybersecurity, human-led vulnerability discovery, threat detection and response, and reputation defense — in one coherent practice, because modern adversaries do not respect the boundaries between them. We exist to find the unknown, to signal it before it becomes a crisis, and to do the work that does not announce itself, for the institutions that cannot afford the alternative.

Where we are

Namlameis operates from a branch in Salzburg, Austria, and works with clients internationally.

DEV NOTE Per instruction: state the founding year (2024) prominently, and give location only as country and city — a branch in Salzburg, Austria. Do not publish a full street address on the site; keep that to the contact channel / legal pages as required.

Eyebrow: LEADERSHIP

Hero headline: In their own words.

A message from the Founder & CEO — Malik Myasar A.

“I founded Namlameis because the institutions worth defending deserve more than noise. They deserve a small firm of patient people who do the work, find what is genuinely there, and report it without theatre. I am not in a hurry to be the loudest voice in our field. I intend, instead, to be the most useful one — the team you call when the threat is the one no one else thought to look for. That is the promise behind everything we build.”

— Malik Myasar A., Founder & Chief Executive Officer

A message from the COO & CTO — MD Hasanur Rahman

“Security is not a product you purchase once; it is a discipline you practice every day. My responsibility is to make certain that the standard we promise is the standard we deliver — in every test we run, every system we defend, and every finding we hand to a client. We measure ourselves by what we discover before an adversary does. That is the craft, and it is the whole of the company.”

— MD Hasanur Rahman, Chief Operating Officer & Chief Technology Officer

DEV NOTE Leadership photographs to be supplied; until then use the monogram-avatar treatment (initials on a navy gradient) used elsewhere in the brand. Titles must match the final signed appointment documents before publication.

Eyebrow: ENGAGE

Hero headline: Start a confidential conversation.

Hero sub-headline: Tell us what you need to defend. Most engagements begin with a short, confidential call; if we are the right firm, we follow with a clear proposal — usually within a week.

Contact details

- **General enquiries:** hello@namlameis.com
- **Secure / encrypted:** secure@namlameis.com (PGP fingerprint available on request)
- **Vulnerability disclosure:** disclose@namlameis.com
- **Location:** Branch in Salzburg, Austria
- **LinkedIn:** linkedin.com/company/namlameis

Service-request form

A client should be able to register a request directly on this page. The team reviews every submission and responds.

DEV NOTE Build the form with the fields below. Mark required fields with *. On submit, validate server-side, store the request and/or email it to the team, and show the confirmation message. Protect against spam (rate limit + a privacy-respecting check). Never expose secrets in client code.

Field label	Type	Notes
Full name *	Text	Required
Company / organization	Text	Optional but encouraged
Work email *	Email	Required; validate format
Phone	Tel	Optional; international format
Industry	Select	FinTech · Government & Defense · Critical Infrastructure · Technology · Other
Service required *	Select (multi)	The four solutions + capabilities; allow multiple
Requirement / message *	Textarea	"Describe what you need to defend." Required
Preferred timeline	Select	Urgent · 1–3 months · Exploring
Consent *	Checkbox	"I agree to the privacy policy." Required

Submit button: Submit request

Confirmation message: Thank you. Your request has reached our team — we treat every enquiry as confidential and will respond shortly.

Footer

Logo (ant mark + “Namlameis” wordmark) and the line: “Defense-grade cybersecurity, AI, and complex vulnerability discovery. We find what others miss — before it finds you.” Columns: Solutions, Industries, Platform, Company, Contact. Bottom line: “© 2024–2026 Namlameis · Salzburg, Austria” with links to Privacy, Terms, Security, and the LinkedIn icon.

Brand assets checklist for the developer

- Logo: ant mark + wordmark, in navy, white, and amber (SVG preferred).
- Icon / favicon: ant mark alone.
- Fonts: display serif (Fraunces), sans (Geist/Inter), mono for labels.
- Palette: navy #0B1A2E, ink #0A1424, amber #F0712C, azure #3D7DD8, teal #1FA98F, paper #FFFFFF / #F7F9FC.
- Tone: calm, confident, premium. Generous whitespace. One clear call-to-action per section.

SEO defaults

- **Site title:** Namlameis — Defense-grade cybersecurity, AI & vulnerability discovery
- **Meta description:** Namlameis unites AI-powered cybersecurity, human-led vulnerability discovery, threat detection and response, and reputation defense. We find what others miss — before it finds you.
- Give every page its own title and description; add Open Graph image and tags; generate sitemap.xml and robots.txt.

End of website content specification. All copy herein is original and brand-aligned, written to be placed directly on the site. Capability claims should be matched to the firm’s verified, deliverable services before publication, and any certifications or accreditations should appear only once genuinely held.
